## Project Control in Project Management

Resource provided by [Oke Yusuf Olawale](#)

10 June 2016 – Akure, Ondo State, Nigeria – A new resource has been added to the PM World Library related to project and program management applications. The new resource is titled “**Project Control in Project Management**” and comes from the US state of Arkansas.

According to PMI’s Guide to the Project Management Body of Knowledge (PMBOK®), project control refers to “A project management function that involves comparing actual performance with planned performance and taking appropriate corrective action (or directing others to take this action) that will yield the desired outcome in the project when significant differences exist.”

The Project and Enterprise Program Management Office in the Department of Information Services, US State of Arkansas government, provides a good description of project control in their “Project Management Methodology.”

To access this new resource, go to <http://pmworldlibrary.net/ppm-applications-and-hot-topics/>, click on “Project Controls”, then scroll down to find this resource. Must be a registered and logged-in professional or scholar level member to access.

---

### For post in PMWL

Project Control in Project Management – Effective monitoring and control of project progress against plans is critical for the success of any project or program. The Project and Enterprise Program Management Office in the Department of Information Services for the US State of Arkansas provides a good overview. To learn more:
